

WHAT IS ANXIETY?

Anxiety is a feeling of unease, such as worry or fear, that can be mild or severe.

It's normal to feel worried and anxious about sitting an exam, or having a job interview. However, some people **find it hard to control their worries**. Their feelings of anxiety affect them all the time in their daily lives.

People with anxiety **may feel worried or uneasy most days** and often struggle to remember the last time they felt relaxed. As soon as one anxious thought is resolved, another may appear about a different issue.

Signs & symptoms

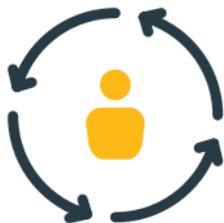

Anxiety can cause both mental and physical symptoms including:

**feeling restless
or worried**

**having trouble
concentrating or
sleeping**

dizziness

rapid heartbeat

What causes anxiety?

It's not always easy to know why people become anxious as it can be a combination of things, including:

- ➔ A chemical imbalance in the brain which affects moods;
- ➔ The genes you inherit from your parents;
- ➔ Stressful or traumatic experiences such as domestic violence, child abuse or bullying;
- ➔ Having a painful long-term health condition, such as arthritis;
- ➔ Drug or alcohol misuse.

However, many people develop anxiety for no apparent reason.

Treating anxiety

Anxiety can have a significant effect on your daily life, **but several different treatments are available** that can ease your symptoms. These include:

PSYCHOLOGICAL THERAPY

such as Cognitive Behavioural Therapy

MEDICATION

such as antidepressants

There are also many things **you can do yourself** to help reduce your anxiety, such as:

going on a
self-help course

exercising
regularly

stopping
smoking

cutting down
alcohol / caffeine

Some GPs in Bristol offer social prescribing for anxiety, which involves **access to art, exercise, cooking and other health-related programmes** at a location near you.
